

# INTERNATIONAL VETERINARY HEALTH

**Our mission is to improve lives by reducing diseases in animals and people globally through partnerships with governments and organisations**

## COLLABORATION

We work with governments and organisations by providing solutions to control transboundary and emerging diseases, such as vaccine or antigen banks, emergency supply of vaccines, and raising disease awareness.

## EXPERIENCE

A dedicated team with extensive experience in Veterinary Medicine, Marketing, Logistics and Tender Management. We have the skills to help governments and organisations around the globe.

## INNOVATION

We continuously look for new ways to help animals and people. Technological advancements, improving communications and digital innovations help us to provide the best solutions.

## PRESENCE

MSD Animal Health operates in more than 140 countries, with a regional understanding enabling rapid response to emergencies and changing disease landscapes. For example, our expertise and rapid deliveries of Lumpyvax™ vaccine helped countries in Europe manage the lumpy skin disease outbreaks.

## RESEARCH

Research is central to what we do, both within company and in collaboration with leading institutes and universities. By rapidly recognising emerging threats we developed vaccines for Bluetongue Serotype 8 (Bovilis® BTV8) and Schmallenberg Disease (Bovilis® SBV). We regularly develop new FMD strains in response to changing epidemiology.

## SUPPORT

We believe in making a difference. That is why we donate vaccines to rabies elimination programs in Africa and Asia, and support FMD research in East Africa. We also raise awareness and advance science through various awards (Rabies Hero, World Rabies Day, FMD Research).

## OUR PRODUCTS INCLUDE:

**Nobivac® Rabies**

**Nobilis® Influenza**

**Lumpyvax™**

**Decivac® FMD DOE**
